

The Top Business Drivers for **Managed IT Services**

The Top Business Drivers for Managed IT Services

Before we dive into the benefits of managed IT services, let's first define what it is. Managed IT services refers to outsourcing your business technology to a third-party managed service provider (MSP).

Your MSP manages your IT infrastructure on a proactive basis and typically under a subscription model. Rather than reacting to IT problems, a true managed services model ensures issues can be detected and resolved before they disrupt your business operations. Outsourcing your IT to a team of experienced IT professionals adds value to your business in several ways.

Who Uses Managed IT Services?

Typical MSP customers include [small and medium-sized businesses](#). For smaller companies with limited in-house IT resources, an MSP offering is a cost-effective way to gain more comprehensive IT expertise. Larger enterprises may also leverage managed IT services to supplement their in-house staff to allow them to focus on more strategic IT projects and initiatives.

Our proactive services model provides clients of all sizes and varying industries a predictable support plan that evolves as you grow. Discover the business benefits of our proactive approach to IT.

“For smaller companies with limited in-house IT resources, an MSP offering is a cost-effective way to gain more comprehensive IT expertise.”

Managed IT Services vs. Break/Fix

A break/fix IT model typically works like this: You need a new server because you've experienced growth or you need to implement new software. You call up your IT provider who comes in, installs the new server, and then leaves you to it. You have no further plans on where your business technology stands until it's time for another upgrade – which is part of the problem.

The disadvantage of the break/fix service model is that when you make the call to your provider, there's already a problem affecting your business. If your server goes offline, that means your employees can't work, which leads to prolonged downtime, lost revenue and greater risk.

Main Factors Driving End Users Managed Services Decision

Improve efficiency/
reliability of IT Operation

Enhanced security/
compliance

Proactive approach to
maintenance

ROI/cost savings

Free IT staff to work on
strategic projects
